KURSAT YILMAZ

Founding Product Architect | Full-Stack & Mobile Developer | Ships from Zero to Production

Istanbul, Turkiye | +90 545 380 98 28 | tckursat@icloud.com | devkursat.github.io

Founding product architect with a 100+ GitHub and product-development project archive across web, mobile, backend systems, AI integrations, Firebase, Supabase, payment flows, social platforms, CMS/CRM products and operational software. Designed and built the majority of these projects independently, owning product logic, UX, system architecture, code, integrations, deployment and iteration. Known for practical intelligence, solution-oriented execution and the ability to break blockers fast. Selectively curates the portfolio; the core strength is high-output building, technical depth and shipping products to production.

VALUE PROPOSITION

Product architecture

Connects user flows, data models, APIs, UI, payments, notifications and launch strategy.

100+ project archive

Mostly solo-built MVPs, live products, client systems, mobile apps, social platforms and operational tools.

Practical intelligence

Simplifies messy problems, selects the workable path and manages technical risk quickly.

Execution discipline

Builds beyond the prototype: usable, measurable and maintainable production systems.

FLAGSHIP PRODUCT PORTFOLIO

Otag - Cultural Social Network & Community Ecosystem | 2024 - Present

Istanbul | Founder, Product Architect & Lead Developer

- Mostly solo-architected a cultural community platform combining social feed, notifications, direct messaging, profiles, location, mentorship, events and engagement economy in one ecosystem.
- Designed the feed algorithm, engagement mechanics, monetisation layer and moderation flows for a product that reached 5,000+ users in its first launch month.
- Owned frontend, state architecture, Supabase data model, RLS security, mobile-first UX and the product roadmap as the sole technical founder.

Tech: React, TypeScript, Supabase, Realtime, RLS, PWA, Figma

VoltNet - Unified EV Charging Network | 2025 - 2026

Istanbul | Product Builder & Lead Developer

- Built a map-centric platform that unifies multiple EV charging providers into one user experience.
- Simplified real-time station data, availability, routing, pricing, payments and third-party API normalisation into a coherent product flow.
- Led user research, UX, backend architecture, PostgreSQL data modelling and mobile/web experience end to end.

Tech: React, React Native, Node.js, PostgreSQL, Mapbox API, Figma

Lusid AI - AI Journaling & Dream Analysis | 2023 - 2025

Istanbul | Product Builder & Lead Developer

- Built an AI-powered personal insight product combining journaling analysis, dream interpretation, creative writing support and anonymous sharing.
- Designed prompt flows, privacy-first data architecture, Supabase models, anonymous community mechanics and a calm mobile experience.
- Turned AI from a surface feature into a repeat-use personal reflection loop.

Tech: React Native, Node.js, Supabase, AI API integration, Figma

OpsPilot AI - Business Workflow Automation Platform | 2024 - 2025

AI automation and operational intelligence | Product Architect & Full-Stack Developer

- Designed an automation architecture that turns repetitive business processes into AI-assisted workflows across forms, documents, notifications, decisions and task tracking.
- Built the logic for prompt pipelines, user roles, secure data models, activity history and operational dashboards.
- A strong example of practical problem solving: turning a messy operational process into a clear, working product.

Tech: React, Node.js, Supabase, AI API integration, workflow engine, webhooks

COMPLETED PRODUCT ARCHITECTURES

CommerceOS - E-Commerce, CRM & Operations Suite | 2019 - 2023

B2B / SME / service businesses | Solution Architect & Full-Stack Developer

- Built modular web systems combining e-commerce, customer management, inventory, orders, payments, reservations and admin dashboards.
- Translated client briefs into business workflows, data models, role-based panels, payment integrations and production launch plans across 15+ custom systems.
- Created easy-to-manage tools for non-technical teams with fast delivery, low maintenance cost and measurable operations.

Tech: Laravel, PHP, MySQL, JavaScript, REST API, Stripe, SEO

HospitalityOS - Restaurant & Tourism Operations Platform | 2022 - 2023

Fine dining, tourism and multilingual service experience | Lead Architect & Developer

- Combined TR / EN / FR QR menus, operations panel, live price updates, Stripe tipping, loyalty coupons and wait-time engagement into one hospitality product.
- Solved live-service pressure across tourist traffic, language barriers, fast menu operations and non-technical staff usage.
- Delivered a durable, low-maintenance hospitality tech product grounded in real operational needs.

Tech: Vanilla JS, Node.js, Stripe, JSON CMS, QR infrastructure, multilingual SEO

Mobile Product Lab - Published Consumer Apps | 2024 - 2025

Quotable / Iyilik Zinciri / personal development and social good products | Product Builder & Mobile Developer

- Built an end-to-end mobile product pipeline from idea to App Store release: concept, UX, Figma, React Native, backend and post-launch iteration.
- Developed consumer experiences around personal collections, daily motivation, social good, community engagement and repeat-use habits.
- Combined design, code, release, measurement and optimisation in a fast product cycle.

Tech: React Native, TypeScript, Firebase, Supabase, Figma, App Store workflows

PROJECT PORTFOLIO MAP

Social platforms Feed, profiles, notifications, DM, engagement economy, moderation, community growth	**Web & SaaS** CMS, dashboards, reservations, e-commerce, operations panels, multilingual SEO	**Mobile products** React Native apps, App Store workflows, user habits and retention loops
AI & automation AI API integration, personal insight flows, prompt pipelines, secure data models	**Payments & revenue** Stripe, webhooks, tipping, coupons, subscription/monetisation and product economics	**Maps & location** Mapbox, real-time data, city/country selection, routing and discovery experiences

TECHNICAL SCOPE

Architecture & Product System design, API architecture, lifecycle ownership, MVPs, roadmaps, CMS/CRM, hospitality tech	**Frontend & Mobile** React, React Native, Next.js, TypeScript, Vanilla JS, Alpine.js, FlutterFlow	**Backend & Data** Node.js, PHP/Laravel, Python, PostgreSQL, MongoDB, MySQL, Supabase, Firebase
AI & Integration AI API integration, automation, third-party APIs, Mapbox, real-time data flows	**Payments & Analytics** Stripe, webhooks, GA4, GTM, Hotjar, funnels and product behaviour tracking	**Design & Deployment** Figma, Canva, SEO, hreflang, Schema.org, Vercel, Netlify, Docker

EXECUTION STYLE

- Turns ambiguity into product decisions: clarifies requirements, flows, data models, APIs and launch plans fast.
- Breaks blockers with practical intelligence: unclear scope, API gaps, design holes or time pressure do not stop delivery.
- Sees the whole product: connects design, engineering, integrations, security, analytics and operations.
- Finishes the work: ships the product, learns from users and leaves the system maintainable.

EDUCATION, LANGUAGE & TARGET ROLES

Education
42 Istanbul - Software Development Program
Ankara University - Bachelor's Degree, since 2023

Languages & Recognition
Turkish: Native | English: B2, professional working proficiency
100+ project archive on GitHub; majority independently designed and built
GitHub Arctic Code Vault Contributor
FlutterFlow Ambassador recognition
App Store / Google Play published apps

Target roles: Senior Full-Stack Developer, Product Architect, Technical Founder / Builder, or a high-ownership engineering role where complex products must move from zero to production. Available for full-time, hybrid or on-site roles in Europe and international product teams. Portfolio and references available on request.
